

Euro - € 10 bill

See-through number

Marks printed in the top corner of the banknote, on both sides, combine perfectly to form the value numeral. You can see the complete number when holding the banknote against the light.

Raised Print

Special printing makes the ink feel raised or thicker in the main image, the lettering and the value numerals on the front of the banknotes. To feel the raised print, run your finger over it or scratch it gently with your fingernail.

Additional tactile marks for the visually impaired are included on the bottom edge of the €200 banknote and on the right-hand edge of the €500.

Hologram

Tilt the banknote – the hologram image will change between the value and the € symbol on a rainbow-coloured background. At the edges, tiny letters show the value.

Security thread

The security thread is embedded in the banknote paper. Hold the banknote against the light - the thread will appear as a dark stripe. The word "EURO" and the value can be seen in tiny letters on the stripe.

Watermark

The watermark is produced by varying the thickness of the paper. It appears when you hold the banknote against the light. If you put the banknote on a dark surface the light areas become darker. This effect is very easy to see in the value watermark.

Under UV light

the paper itself does not glow.

fibres embedded in the paper appear, coloured red, blue and green.

the flag of the European Union looks green and has orange stars.

the signature of the ECB President turns green.

the large stars and small circles on the front glow. The map, bridge and value numeral on the back appear in yellow. Front
